EASY TO USE

Although DrainIt! Is simple to install, it does need proper positioning for maximum effectiveness.

Follow these 4 easy steps:

STEP 1 · Identify The Size of Your Container (Pot, Bowl or Urn)
Measure the diameter of the top opening of your container, and match it to one of DrainIt's versatile sizes.

STEP 2 · Insert DrainIt! Into Your Container
Place DrainIt! Into the bottom of your container (make sure that the beads inside the disc are in a single layer and the skirt is flat against the inside wall).

STEP 3 · Fill Your Container with Potting Soil
Scoop potting soil onto the center and push the soil to the sides until it extends beyond the fabric skirt. Then fill the container as you would normally.

STEP 4 · Plant and Water
Place the transplants in new container and fill with enough potting soil to cover any exposed roots. (You should see at least 1 inch of the rim inside of container.) Then water your new plants. Additional soil may be needed if settling occurs.

Reuse
Clean and reuse disc. Sterilize by drying naturally and replant following the easy to use Steps 1-4.
